# Day 03 – Linux Commands Practice

## Task

master ▾

[90DaysOfDevOps](#) / [2026](#) / [day-03](#) /

[↑ Top](#)

You will create a cheat sheet of commands focused on:

- Process management
- File system
- Networking troubleshooting

This is the command toolkit you will reuse for years.

## Expected Output

---

By the end of today, you should have:

- A markdown file named:  
`linux-commands-cheatsheet.md`

or

- A hand written cheat sheet (Recommended)

Your cheat sheet should be easy to scan during real troubleshooting.

## Guidelines

---

Follow these rules while creating your cheat sheet:

- Include **at least 20 commands** with one-line usage notes
- Add **3 networking commands** ( `ping` , `ip addr` , `dig` , `curl` , etc.)
- Group commands by category
- Keep it concise and readable

## Resources

---

You may refer to:

- Linux `man` pages
- Your class notes
- Reliable Linux command references

Don't copy long lists. Focus on commands you understand.

## Why This Matters for DevOps

---

Real production issues are solved at the command line.

The faster you can inspect logs and network issues, the faster you can:

- Restore service
- Reduce downtime

- Gain trust as an operator

## Submission

---

1. Fork this `90DaysOfDevOps` repository
2. Navigate to the `2026/day-03/` folder
3. Add your `linux-commands-cheatsheet.md` file
4. Commit and push your changes to your fork

## Learn in Public

---

Share your Day 03 progress on LinkedIn:

- Post 2–3 lines on your favorite Linux commands
- Share one log command and one networking command
- Optional: screenshot of your cheat sheet

Use hashtags: `#90DaysOfDevOps` `#DevOpsKaJosh` `#TrainWithShubham`

Happy Learning
