Day 09 – Linux User & Group Management Challenge

master

90DaysOfDevOps / 2026 / day-09

↑ Top

Today's goal is to **practice user and group management** by completing hands-on challenges.

Figure out how to:

- Create users and set passwords
- Create groups and assign users
- Set up shared directories with group permissions

Use what you learned from Days 1-7 to find the right commands!

Expected Output

- A markdown file: `day-09-user-management.md`
- Screenshots of command outputs
- List of commands used

Challenge Tasks

Task 1: Create Users (20 minutes)

Create three users with home directories and passwords:

- `tokyo`
- `berlin`
- `professor`

Verify: Check `/etc/passwd` and `/home/` directory

Task 2: Create Groups (10 minutes)

Create two groups:

- `developers`
- `admins`

Verify: Check `/etc/group`

Task 3: Assign to Groups (15 minutes)

Assign users:

- `tokyo` → `developers`
- `berlin` → `developers` + `admins` (both groups)
- `professor` → `admins`

Verify: Use appropriate command to check group membership

Task 4: Shared Directory (20 minutes)

1. Create directory: `/opt/dev-project`
2. Set group owner to `developers`
3. Set permissions to `775 (rwxrwxr-x)`
4. Test by creating files as `tokyo` and `berlin`

Verify: Check permissions and test file creation

Task 5: Team Workspace (20 minutes)

1. Create user `nairobi` with home directory
2. Create group `project-team`
3. Add `nairobi` and `tokyo` to `project-team`
4. Create `/opt/team-workspace` directory
5. Set group to `project-team` , permissions to `775`
6. Test by creating file as `nairobi`

Hints

Stuck? Try these commands:

- User: `useradd` , `passwd` , `usermod`
- Group: `groupadd` , `groups`
- Permissions: `chgrp` , `chmod`
- Test: `sudo -u username command`

Tip: Use `-m` flag with `useradd` for home directory, `-aG` for adding to groups

Documentation

Create `day-09-user-management.md` :

Day 09 Challenge

Users & Groups Created

- Users: `tokyo`, `berlin`, `professor`, `nairobi`
- Groups: `developers`, `admins`, `project-team`

Group Assignments

[List who is in which groups]

Directories Created

[List directories with permissions]

Commands Used

[Your commands here]

What I Learned

[3 key points]

Troubleshooting

Permission denied? Use `sudo`

User can't access directory?

- Check group: `groups username`
- Check permissions: `ls -ld /path`

Submission

1. Fork this `90DaysOfDevOps` repository
2. Navigate to `2026/day-09/` folder
3. Add your `day-09-user-management.md` with screenshots
4. Commit and push

Learn in Public

Share your Day 09 progress on LinkedIn:

- Post about completing the user management challenge
- Share one thing you figured out
- Mention real-world DevOps use

Use hashtags:
